INTELLIGENCE LED

Datong's solutions development has been led for more than 35 years by the most respected Armed Forces, Law Enforcement and Intelligence agencies in the world.

- Led by the best in miniaturisation, mapping systems, communications and power management
- Led by in-house product innovation, software development and manufacturing of quality products
- Led by an ingrained commitment to serving our customers with confidentiality assured

INTELLIGENCE BACKGROUND

The world's leading agencies continue to use Datong solutions for gathering critical intelligence on an increasingly international scale.

Intelligence gathering techniques have constantly and rapidly developed with the changing nature of terrorism and crime. Our solutions have regularly been re-mastered to ensure that their acquired intelligence is accurate, timely and uncompromised.

Some specialised acquisition activities require custom technology developments that can be trusted to deliver a successful outcome. Our in-house R&D specialists are regularly called upon to create these solutions for use in specific arenas. We have the skills to build these solutions from scratch or, more commonly, to utilise the core of our existing products as the basis from which to develop a system that delivers exactly what you require.

INTELLIGENCE FOR ALL AGENCIES

Our solutions support the work of agencies around the world.

- Military
- Law Enforcement
- Federal
- Reconnaissance
- Intelligence
- Security

Typical Applications

- Special Forces operations
- Terrorist activity
- Target tracking
- Illegal trafficking
- Urban surveillance
- Serious organised crime
- Cellular interception
- Anti-narcotics
- Border crossings
- Protection of personnel

INTELLIGENCE FOR ALL ARENAS

The Datong product family has been designed to deliver reliable, uncompromised intelligence in all operating environments.

Target size

From the smallest packet or mobile phone through to the largest vessel, our tracking devices are available in a variety of sizes and are designed for rapid, covert deployment.

Communications infrastructure

The available communications infrastructure will determine your choice of technology. Datong provides solutions that utilise all commonly available satellite and terrestrial communications, as well as highly reliable infrastructure-independent solutions that can be controlled by the end user.

Complexity of operation

Selecting a Datong solution allows you to operate across a wide range of mission types. Our systems can be easily integrated with other command systems or customised for local requirements. Our most simple solution can be deployed and managed by a single operative; our most complex solution has yet to be reached.

INTELLIGENCE TO THE CORE

The needs of the Intelligence community are particularly close to the heart of our business in the key areas of R&D and manufacturing.

Research & Development

We have a team of in-house experts who have been creating best-in-class product solutions for more than 35 years. Our specialist knowledge of emerging communications technology, integrated systems and enhanced user interfaces is well recognised. This expertise provides our people with unprecedented access to the leading agencies in order to keep our products in the front line.

Manufacturing

Our clients work in harsh arenas from the Arctic to the tropics and from urban heartlands to rugged wilderness so we manufacture our products with this fully in mind. A multi-million pound investment in our specialist electronics manufacturing facility allows us to control every facet of our production cycle and to deliver reliable, robust and long-lasting products.

INTELLIGENCE THROUGH LIFE

Datong systems are designed to gather intelligence in extremely demanding environments.

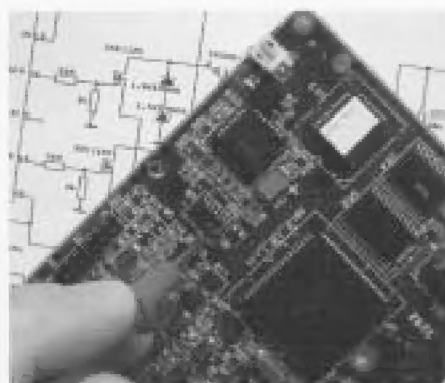

To maintain the flow of intelligence throughout the life of the system, we provide a range of through-life support services that allow you to maximise your use of the equipment and the efficiency of your personnel. Our new product developments are designed to provide smooth system upgrades to preserve capability and system knowledge within your agency.

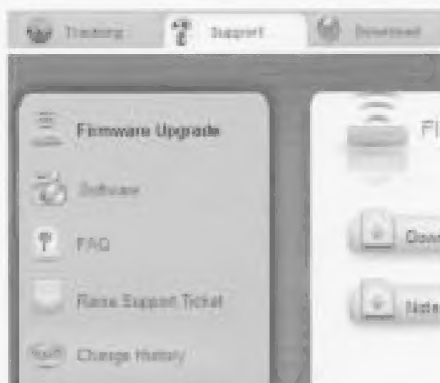

■ Technical Support

■ Training in operation and command, both initial and refresher

■ Repairs, Service and Maintenance

■ Software upgrades
